

Carlos Garcia

reto: day 5

<https://github.com/carlos3474004/30-dia-de-codigo/tree/main/hackerrank/day5>

The screenshot shows a HackerRank challenge completion interface. At the top, a badge indicates '30 Days of Code' and a message states 'You have earned 30.00 points!'. A progress bar shows '80%' completion, with a note 'You are now 1 challenge away from the 2nd star for your 30 days of code badge.' and a '6/7' indicator. A green banner reads 'Congratulations' and 'You solved this challenge. Would you like to challenge your friends?' with social media icons for Facebook, Twitter, and LinkedIn. A 'Next Challenge' button is also present. On the left, a sidebar lists 'Test case 0', 'Test case 1', and 'Test case 2', all marked as passed. The main area displays the 'Compiler Message' as 'Success'. Below this, the 'Input (stdin)' is shown as '2' with a 'Download' link. The 'Expected Output' is a list of multiplication results: '2 x 1 = 2', '2 x 2 = 4', '2 x 3 = 6', '2 x 4 = 8', '2 x 5 = 10', and '2 x 6 = 12', each with a 'Download' link.

30 Days of Code

You have earned 30.00 points!

You are now 1 challenge away from the 2nd star for your 30 days of code badge.

80% 6/7

Congratulations

You solved this challenge. Would you like to challenge your friends?

Next Challenge

Test case 0

Test case 1

Test case 2

Compiler Message

Success

Input (stdin)

Download

2

Expected Output

Download

2 x 1 = 2

2 x 2 = 4

2 x 3 = 6

2 x 4 = 8

2 x 5 = 10

2 x 6 = 12

Traducción del Problema

Objetivo

En este desafío utilizaremos bucles (*loops*) para realizar algunas operaciones matemáticas.

Tarea

Dado un número entero n , imprime sus primeros 10 múltiplos. Cada múltiplo i (donde $1 \leq i \leq 10$) debe imprimirse en una nueva línea con el formato: $n \times i = \text{resultado}$.

Ejemplo

Si $n = 3$, la salida debe verse así:

Plaintext

```
3 x 1 = 3
3 x 2 = 6
3 x 3 = 9
3 x 4 = 12
3 x 5 = 15
3 x 6 = 18
3 x 7 = 21
3 x 8 = 24
3 x 9 = 27
3 x 10 = 30
```

Formato de entrada

Un único número entero, n .

Restricciones

- $2 \leq n \leq 20$

Formato de salida

Imprime 10 líneas de salida; cada línea i (donde $1 \leq i \leq 10$) contiene el resultado de $n \times i$ en el formato: $n \times i = \text{resultado}$.

Solución en Python 3

Puedes reemplazar o completar el código en el editor con lo siguiente:

Python

```
#!/bin/python3
```

```
import math
import os
import random
import re
import sys
```

```
if __name__ == '__main__':
    n = int(input().strip())
```

```
    for i in range(1, 11):
        print(f'{n} x {i} = {n * i}')
```

Explicación del código:

- `range(1, 11)`: Genera una secuencia de números del 1 al 10.
- `f"{n} x {i} = {n * i}"`: Usa *f-strings* de Python para formatear el texto exactamente como lo requiere el ejercicio.
